

5-The Toolbar - Part 2

Note Repeat: When recording midi, you can have logic automatically repeat notes without lifting your finger from the keyboard. Instead of getting a long note recorded, you get a bunch of repeated notes at a specific length.

Spot Erase will also only work while recording midi. You can erase midi notes by keeping the desired note you want to delete pressed in the keyboard while you record.

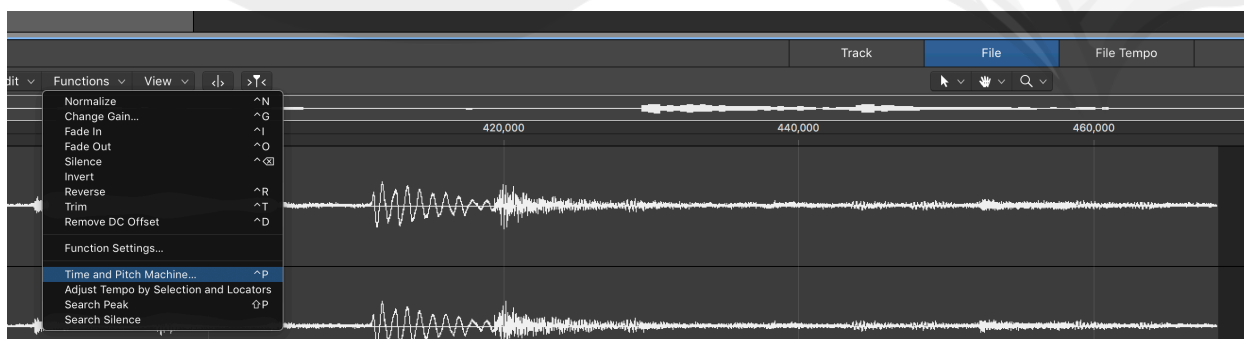

The Stretch to Locators button will expand a region to match the length of your locators.

For midi regions it will change the length of the notes and their positions. For Audio regions it will apply destructive time stretching with a function called “Time & Pitch Machine”. It is destructive because it changes the audio file itself, so any other audio region with the same audio file will also be changed. Logic will display a warning, to make you aware of the destructive nature of this processing tool.

You can also access the Time & Pitch machine under the functions tab of the Audio File editor.
