

10 - The sequencer's top bar - Introduction

The first button is used when working with folders.

When we click inside a folder, we enter inside of it and only see the tracks that are inside the folder. This button allows you to leave folders. In other words, go back to the previous folder until you return to the original view of the sequencer with all your tracks.

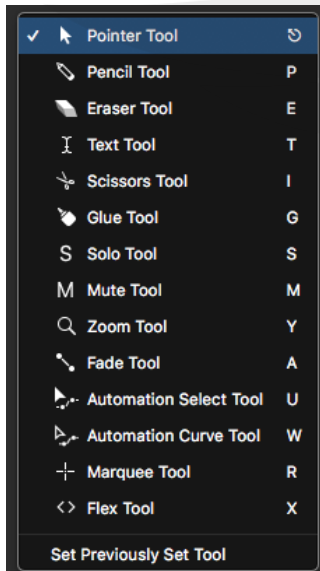

The next tabs - Edit, Functions, and View - contain many useful options for editing, processing, and visualization.

You can access the automation here, or open it from Mix > Show Automation.

Access Flex Time from this other button, or go to Edit > Show Flex Pitch/Time. Remember you can always also use key-commands to do this.

The middle section of available commands contain the so called "Tools". They allow us to work with regions and edit them.

There are 3 tools available at the same time. The one in the left is the default one. To access the one in the middle press Command and keep it pressed as long as you need. The one in the right will appear when you right click with your mouse.

By default, Logic will only have the first two tools available for you, so you have to change your Preferences in order to set the 3rd one. [Logic > Preferences > General > Editing > Right Mouse Button > Is Assignable to a Tool](#). Under the Editing tab of the General Preferences pane, the Right Mouse Button can be assigned to a tool.
