

19 - User Patches Part 1 - Channel Strip Settings

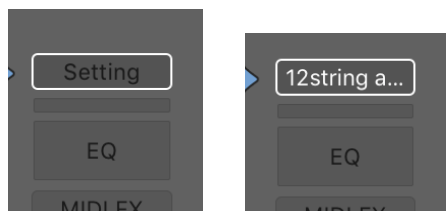

The Channel Strips Settings folder contains all your saved channel strip settings.

Saving a channel strip setting will save the top part of the channel. Sends, panning, or fader values will not be saved.

Use a key-command to quickly load the next channel strip setting in the Channel Strip Settings Folder.

The name of the setting will display in the top of the Channel Strip.

The Channel Strip Folder is saved into a specific location inside your computer. It lives under your **main drive > users > your user > music > audio music apps**

 /Users/mita1/Music/Audio Music Apps

along with other important folders as the Patches Folder which contain the Patches and User Patches.

User Patches are similar to Channel Strips, in the sense that they are used to load pre-configured tracks. But there are some differences:

Patches live in Logic's library, while Channel Strips live inside a little menu inside the pre-created track.

I need to create a track first before I load a channel strip. With patches one or many tracks are automatically created.

This makes Patches the best choice when wanting to load new instruments or pre-mixed audio or aux tracks.
