

21 - User Patches Part 3 - Creating a Template

Create user patches in order to build yourself a convenient library of sounds to quickly load into your session.

I have created over 1000 tracks in this template. Every single instrument has been saved inside my library as a user patch.

I can load my template when I start a project for the first time, or I could instead, start with an empty session, and end up having a similar configuration of tracks by loading user patches.

Always create your user patches inside of your template. That way these patches become part of it. Loading user patches one by one will take for ever, but loading a template takes seconds.

User Patches are saved in a specific folder of your computer. If the files that contain the patches are moved from this location, Logic will not be able to access them. Therefore it is important to know where this folder is and.. back it up! The Patches folder lives under your **main drive > users > your user > music > audio music apps**

 /Users/mita1/Music/Audio Music Apps

Inside of this folder you can find other important folders when working with Logic, as the Key-commands, Project Templates and Channel Strip Settings folders. All worth backing up.
