

## 1-Finder & Logic Pro X

Imagine you want to access your Logic Session but you forgot where you stored it in your computer. Well, you can open the most recent session here [File > Open Recent](#). However this still doesn't show you where the session is located. There is a way to easily find the location of your Logic Session. Click on "Show in Finder" under Project Management [File > Project Manager > Show in Finder](#).

It is not uncommon to have a duplicate of your session folder somewhere in your computer. Avoid working in the wrong folder by always checking where are you saving it.

Logic also allows you to know the location of any Audio File. [Functions > Show Audio File In Finder](#). This way you can easily find a specific audio file inside Finder in a matter of seconds.

Go here if you want to check the version of Logic, in order to see if a certain plug-in is compatible or for problem solving. [Logic Pro X > About Logic Pro X](#). This menu is the same and available for any application on a Mac.
